# Previous uses of pointers...

---

-  Reference to data
-  Output parameters
-  Arrays and strings
-  File pointers

# What happens when we run our executable file?

```
func1(int x) {  
    x += 1;  
    return x;  
}
```

```
int main(void) {  
    int n = 10;  
    n = func1(n);  
    return 0;  
}
```

**Stack memory**

# What happens when we run our executable file?

```
int main(void) {  
    int* nump;  
    nump = malloc(sizeof(int));  
    *nump = 10;  
    free(nump);  
}
```

Stack memory

```
main  
int* nump:
```

Heap memory

# What happens when we run our executable file?

```
int main(void) {  
    int* num;  
    num = malloc(sizeof(int));  
    *num = 10;  
    free(num);  
}
```

**Stack memory**

**Heap memory**

# What happens when we run our executable file?

```
int main(void) {  
    int* nump;  
    nump = malloc(sizeof(int));  
    *nump = 10;  
    free(nump);  
    *nump++;  
}
```

**undefined behavior!**

**Stack memory**

```
main  
int* nump:
```

**Heap memory**

# Dynamic Memory Allocation

## ▶ heap

- region of memory in which function **malloc** dynamically allocates blocks of storage

## ▶ stack

- region of memory in which function data areas are allocated and reclaimed

# Important functions

---

- **malloc(<amnt of memory to reserve>)**
- **calloc(<num>, <amnt of memory to reserve>)**
- **free(pointer)**

**These are all from stdlib.h.**

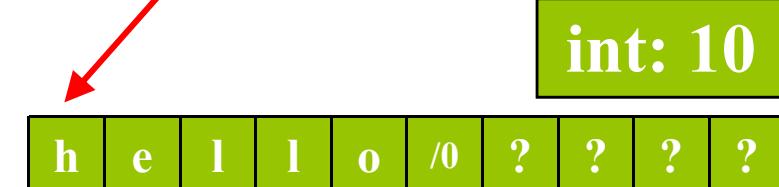

# What happens when we run our executable file?

```
int main(void) {  
    int* nump;  
    nump = malloc(sizeof(int));  
    *nump = 10;  
    char* string1;  
    string1 = calloc(10, sizeof(char));  
    strcpy(string1, "hello");  
    free(nump);  
}
```

## Stack memory

```
main  
int* nump:  
char* s1:
```

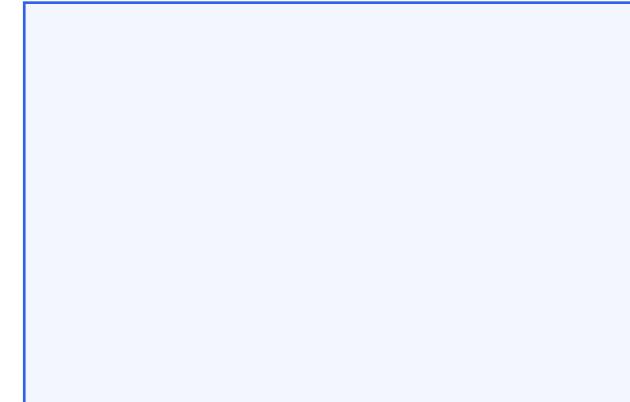

## Heap memory

# What happens when we run our executable file?

```
int main(void) {  
    int* nump;  
    nump = malloc(sizeof(int));  
    *nump = 10;  
    char* string1;  
    string1 = calloc(10, sizeof(char));  
    strcpy(string1, "hello");  
    free(nump);  
}
```

Stack memory

h	e	l	l	o	/0	?	?	?	?
---	---	---	---	---	----	---	---	---	---

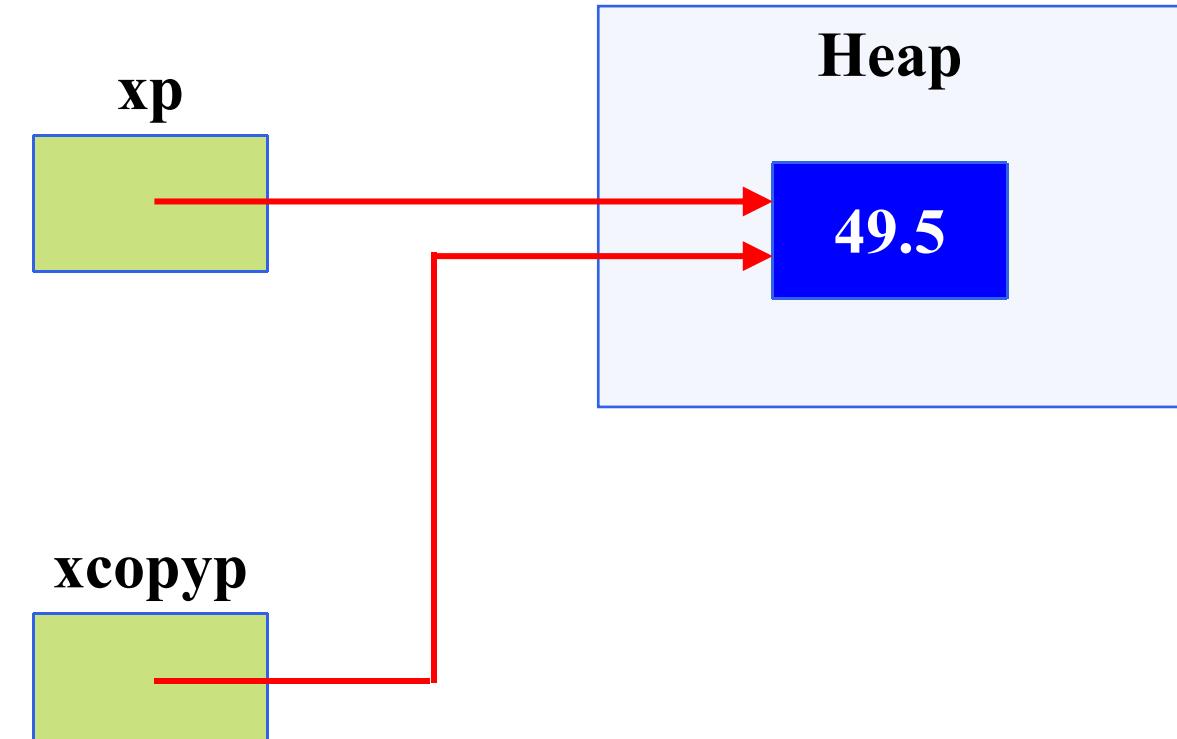

Heap memory

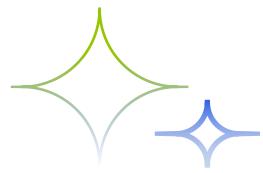

# Figure Multiple Pointers to a Cell in the Heap

```
double *p, *xcopyp;
```

```
xp = (double *)malloc(sizeof(double));  
*xp = 49.5;
```

```
xcopyp = xp;  
free(xp);  
...
```

# THE END
